SHORT AND LONG-TERM MONITORING OF PINILLA DRINKING-WATER RESERVOIR

Condition: New. Publisher/Verlag: Editorial Académica Española | Cyanobacteria & Cyanotoxins | Due to its health risk, the presence of toxic cyanobacteria blooms in water reservoirs used for direct human consumption and/or recreation is receiving increasing attention world-wide. The most frequent and best studied toxic cyanobacteria genus is Microcystis, since many of its strains produce hepatotoxic oligopeptides, microcystins (MCs). MCs are synthesized by the enzyme system microcystin synthetase (MCS), codified by the *mcy* genes. MCS includes two enzyme complexes, a non-ribosomal...

Reviews

These kinds of publication is everything and made me hunting ahead of time and more. I have got read through and i also am confident that i am going to gonna study yet again yet again later on. Its been printed in an extremely basic way in fact it is only after i finished reading this pdf in which in fact transformed me, alter the way i believe.

The book is great and fantastic. I could comprehended almost everything using this published e publication. I am just very happy to explain how here is the very best ebook i have study inside my very own existence and could be he greatest book for ever.

-- **Mekhi Marvin DVM**

The very best publication i at any time study. It really is basic but shocks inside the fifty percent of the ebook. It is extremely difficult to leave it before concluding, once you begin to read the book.
