Springer Berlin Heidelberg Okt 2007, 2007. Buch. Condition: Neu. Neuware - This volume contains nine more contributions from expert researchers of the field, providing readers with in depth and current research results regarding the respective topics. In the first chapter, Flemming et al. review the chemistry, biosynthesis, metabolism and biological activities of tetrahydrocannabinol and its derivatives. Hansch and Verma contribute to the quantitative structure-activity relationship (QSAR) analysis of heterocyclic topoisomerase I and II inhibitors. These inhibitors, known to inhibit either enzyme, act as antitumor agents and are currently used in chemotherapy and in clinical trials. In the third chapter, Khan reviews some aspects of molecular modeling studies on biologically active alkaloids, briefly providing considerations on the modeling approaches. In the next chapter, Khan and Ather review different aspects of the microbial transformations of the important nitrogenous molecules, as they have diverse biological activities. This chapter provides a critical update of the microbial transformations reported in recent years, targeting novel biocatalysts from microbes. In the fifth chapter, Hamdi and Dixneuf describe the synthesis of triazoles and coumarins molecules and their physiological activities. Maiti and Kumar, in their contribution, review the physicochemical and nucleic acid binding properties of several isoquinoline alkaloids (berberine, palmatine and coralyne) and their derivatives under various environmental conditions. In chapter seven, Berlinck describes varieties of polycyclic diamine alkaloids such as halicyclamines, 'upenamide, xestospongins, araguspongines, halicyclamines, haliclonyclamines, arenosclerins, ingenamines and the madagamines, etc., and their synthesis as well as biological activities. 336 pp. Englisch.
