### ***Reviews***

*Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It has been written in a remarkably easy way in fact it is only right after I finished reading this book in which it basically changed me, modified the way I really believe.*

Book Condition: New. Publisher/Verlag: Springer, Berlin | The principal results of the work are as follows: 1. A simplified technique was devised for obtaining Raman spectra of powders. 2. The Raman and infrared absorption spectra of the following oxides were investigated:  $\text{AsP}_3$ ;  $\text{SbP}_3$ ;  $\text{As}_2\text{O}_5$ ;  $\text{TeO}_2$ ;  $\text{GeO}_2$  (two forms) in the crystalline state, and  $\text{AsP}_3$ ;  $\text{GeO}_2$ ;  $\text{TeO}_2$  in the glassy state. 2 5 2 3. The vibrational spectra of the crystalline and glassy forms of the oxides  $\text{AsP}_3$ ;  $\text{GeO}_2$ ;  $\text{TeO}_2$  are similar in many main respects, indicating a similarity of their structural units which determine the vibrational spectra of these substances. 4. By a study of the vibrational spectrum it was shown that arsenious anhydride has a molecular structure and consists of  $\text{As}_2\text{O}_3$  molecules having symmetry of the point group  $T_d$ ; The force constants and vibration frequencies of the  $\text{As}_2\text{O}_3$  molecule were calculated, and the vibrational spectrum of arsenious anhydride was reliably interpreted with the aid of these results. 5. A similar result was obtained for antimonous anhydride, consisting of  $\text{Sb}_2\text{O}_3$  molecules with symmetry of the point group  $T_d$ . The force constants for this molecule were found and the vibrational spectrum was calculated. | I. Polyatomic Molecules and Molecular Crystals (aims, methods, and objects of the investigation, statement of problems, review of literature).- II. Anisotropy of Molecules (determination of the orientation of radiating oscillators with respect to the axes of the molecules by means of the polarization spectra of the luminescence of solutions).- III. The Oriented Gas Model and its Application to Molecular Crystals (polarization diagrams of luminescence).- IV. Migration of Excitation Energy Between the Molecules in Molecular Crystals (dependence of the polarization of the luminescence on that of the exciting light).- V. The Part of Free Excitons in...
