The Jura, arresting the passage of the winds which bear the vapour drawn from the ocean, forces them also to let fall their burden of moisture. By tracing a transverse line to the valley of the Saone from the heights of s Charolais to the mountains of Jura, M. Fournet has ascertained that the annual precipitation increases tolerably regularly with the altitude; from 27-4 inches on the right bank of the Saone it increases gradually to the parallel wall of the Jura; on the western side it becomes greater with the altitude, and thus from the height of the ground we could estimate the mean quantity of rain. On the southern slope of the Cevennes, where the winds blow with such violence because of the rapid variations of temperature produced by insolation and radiation, the difference which is observed between the annual falls of...
