Black soil in Northeast typical watershed sediment load balancing innovative research ideas is the erosion of mud sand particles reflects the erosion and sediment yield process. as well as coupling analysis of a deposition and sediment yield relationship of soil erosion; Soil Erosion process research in the framework of the sediment balance between more effective to a certain extent to avoid erosion and sediment yield research to consider the one-sided understanding of the process. The main innovation of the black soil in Northeast typical watershed sediment balance studies found is to reveal the hidden nature and the typical black soil area to erosion - deposition - sediment yield vertical zonation of the general rules of a typical black soil erosion; to explore and clear erosion and sediment particle characteristics change on erosion and sediment yield process reaction; to explore the sediment balance calculations in the part of too loose erosion - deposition - sediment yield coupled analysis method; reveal the black soil in...
