Excerpt: . . . vpt B where R is constant and where t may be taken as 6 C. 2737. 6 C. being the reading on what we call sometimes an air thermometer and sometimes a nitrogen or hydrogen thermometer with delightful vagueness. 195. The fact most impressed upon the young engineer is this, that in trying to convert as much of the heat energy H as possible into the mechanical form, the temperatures limit our power, and we can only in the most perfect heat engine convert the fraction of the whole. Carnot thought that when heat fell in temperature and work was done, it was like water falling down a height in a water-wheel. He was wrong. iZat the higher temperature T becomes only h at the lower temperature t, the difference H-h being converted into work w in a perfect engine. Taking it that all energy is in the same. . , w T-t units, we have----- H. 1 Instead of thinking of H as analogous with weight of water, let us take as analogous with weight of water. jr A weight--falling through the height T--t would do the work-T--t), so that the analogy is complete. 196. Lord Kelvin put forward a suggestion once that may not probably be acted upon much, until coal is more expensive. It is this. Just as in a heat engine we take in heat H at T, give out heat h at t, converting only the small quantity w...
