

Dense Phase Carbon Dioxide: Food and Pharmaceutical Applications (Hardback)

By -

Iowa State University Press, United States, 2012. Hardback. Condition: New. 1. Auflage.
 Language: English . Brand New Book. Dense phase carbon dioxide (DPCD) is a non-thermal method for food and pharmaceutical processing that can ensure safe products with minimal nutrient loss and better preserved quality attributes. Its application is quite different than, for example, supercritical extraction with CO₂ where the typical solubility of materials in CO₂ is in the order of 1 and therefore requires large volumes of CO₂. In contrast, processing with DPCD requires much less CO₂ (between 5 to 8 CO₂ by weight) and the pressures used are at least one order of magnitude less than those typically used in ultra high pressure (UHP) processing. There is no noticeable temperature increase due to pressurization, and typical process temperatures are around 40 C. DPCD temporarily reduces the pH of liquid foods and because oxygen is removed from the environment, and because the temperature is not high during the short process time (typically about five minutes in continuous systems), nutrients, antioxidant activity, and vitamins are much better preserved than with thermal treatments. In pharmaceutical applications, DPCD facilitates the production of micronized powders of controlled particle...
