Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 Excerpt: . composes nearly all the convolutions. The white matter, consisting largely of fibres, is within, forming the centre of the convolutions. The Cerebellum. Notice the absence of convolutions on the cerebellum, the smaller brain, beneath and at the back of the cerebrum, and the series of transverse folds or pleats in their place. The Medulla. Note beneath the cerebellum the medulla, which appears as an enlargement of the cord below. Under Surface of the Brain. Turn the brain over to examine its under surface. Notice the band which unites the two parts of the cerebrum. 3. The Origin of the Cranial Nerves, The olfactory nerves, or olfactory lobes, proceed from the under surface of the anterior portion of the cerebrum. The optic nerves, the nerves of sight, can be seen, cut close, at the anterior edge of the cerebrum. They pass back, forming the optic tracts, which can be easily discovered by the peculiar crossing of the fibres. Immediately back of this is a pair of nerves which supply nearly all the muscles of the eyeball, including the iris. Back of these is a pair of nerves the largest of all. Fig. 26.--Diagram of brain, showing lines for dissection: (A) cerebrum; (B) cerebellum; (C) medulla. Each is the great sensitive nerve of the head and face. It controls nearly all the muscles of mastication; and some of the fibres go to the tongue for the special sense of taste. Directly back of the above is the...
