

Artificial Life: Borrowing from Biology

Filesize: 8.44 MB

Reviews

This pdf may be worth acquiring. It is definitely simplified but surprises inside the fifty percent of the pdf. I am pleased to let you know that this is the very best ebook we have read inside my own lifestyle and could be he finest publication for ever.
(Prof. Abe Satterfield IV)

ARTIFICIAL LIFE: BORROWING FROM BIOLOGY

 DOWNLOAD

Springer-Verlag GmbH Nov 2009, 2009. Taschenbuch. Book Condition: Neu. 23.5x15.5x cm. Neuware - As we approach the limits and capabilities of machines, we find that the principle of diminishing returns is forcing scientists to turn their attention toward biology to provide practical solutions to problems in our increasingly complex world. An emerging field of science that studies the systems related to life, its processes and evolution is known as Artificial Life (ALife). It draws on the skills and talents of scientists from a variety of disciplines, including, but not limited to, biology, psychology, evolution and computer science. These researchers are showing that, by using even simple simulations of the basic processes of nature, much about our complex natural world and our own humanity can be revealed. Gatherings in the expanding ALife community are becoming more common. One such series, the Australian Conference on Artificial Life (ACAL), began in Adelaide in 2001 and was known as the Inaugural Workshop on Artificial Life. From these small beginnings, it has become a biennial event that has previously been held in Canberra (2003), Sydney (2005) and the Gold Coast (2007). ACAL 2009 received over 60 quality submissions of which 27 were accepted for oral presentation at the conference. Each paper submission was assigned to three members of the Program Committee. The Program Committee, as well as the conference delegates, came from countries across Asia-Pacific, North America and Europe. In addition to the regular papers, the conference was fortunate enough to be able to have two renowned invited speakers Mark Bedau (Reed College, USA) and Andries Englebrecht (University of Pretoria, South Africa). 283 pp. Englisch.
