

Algorithms for Mobile Agents with Limited Capabilities

Filesize: 5.61 MB

Reviews

Great electronic book and useful one. It can be written in straightforward terms rather than difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Cuvillier Verlag Jul 2011, 2011. Taschenbuch. Condition: Neu. Neuware - This work deals with geometric problems and the use of limited capability agents for these problems. Exploration and guarding problems have been extensively studied in computational geometry. The basic task is to monitor an environment (a polygon) either with a mobile guard or with a number of stationary guards (or guards with hard restrictions on the allowed movements). Though all these problems are easy to formulate, and have real-world interpretations that vividly illustrate them, some of these problems (as the classical art gallery problem) are hard to solve. The task of exploring an environment becomes more challenging if the environment is not known in advance, that is, there is no given ground plan and only areas that have already been visibly encountered by the explorer are known. Problems with this kind of uncertainty are called online problems. For offline problems the ground plan of the environment is known in advance. In this work we study one offline exploration problem and one exploration and guarding problem in the offline and online version, where the focus is on the latter. For our problems we do not deal with 'almighty' explorers, but face limits on their perceptive capabilities. Other types of geometric problems can exploit this kind of limited agents: We present an exact and fast algorithm for an image analysis task with polyomino-shaped objects on a grid. Distributed Vision with Smart Pixels. An important image analysis task is the identification of objects present in a given image. If these objects are to be processed automatically, not only the identification of the objects themselves, but also of certain attributes is of interest. The images we treat are pixel (grid) images, with a possibly huge number of intertwined objects. We...
