

Design and Development of Tunable Comb Line MEMS Filter

By Pradhan, Buddhadev

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | RF MEMS Filters | This book deals with a relatively new area of radio-frequency (RF) technology based on Micro Electro Mechanical Systems (MEMS). RF MEMS provides a class of new devices and components which display superior high-frequency performance relative to conventional (usually semiconductor) devices, and which enable new system capabilities. In addition, MEMS devices are designed and fabricated by techniques similar to those of very large-scale integration, and can be manufactured by traditional batch-processing methods. Microwave filters are critical components for electronic warfare, radar and communications systems. But typical tunable filters are bulky, expensive and consume large amounts of power. Radio Frequency MicroElectroMechanicalSystems (RF MEMS) technology provides the possibility of low loss, high linearity filtering in volumes comparable to those of integrated circuits. In this book, the concept is extended to design Radio Frequency (RF) MEMS tunable filters. RF MEMS tunable filters can play an important role in software defined radio architectures by reducing the overall system size and enabling on-chip integration. | Format: Paperback | Language/Sprache: english | 116 pp.

Reviews

I actually started off looking over this publication. I have read through and so i am certain that i am going to likely to study again yet again later on. I am easily will get a delight of reading a written pdf.

-- **Ross Hermann**

These sorts of pdf is the greatest ebook offered. We have study and that i am sure that i will going to study once more once more in the future. Its been printed in an remarkably simple way and it is only after i finished reading through this pdf through which in fact transformed me, affect the way i believe.
