In the wave of increasing fuel prices around the world, Tesla (An American Company) became the bearer of the good news in the motor industry. The company sought to address the ever rising concern by venturing into the designing and manufacturing of electric cars. Model S is one of their renowned sedans, which is a perfect blend of Aston Martin and Jaguar, widely celebrated for being luxurious. In addition to the manufacturing of cars, they are also known to make components for electric trains as well as lithium-ion batteries. The company's first automobile to come to the market using these batteries was the Tesla Roadster, which marked more than 2000 cars in sales in a span of 4 years, covering more than 30 countries. Some of the other models unveiled by Tesla over the years include Model X, and Model 3. As it goes with every other technological innovation, prices tend to shoot quite high with initial productions, and with time go down as quality and quantity increase almost simultaneously.
