Reviews

Certainly, this is the finest job by any publisher. I was able to comprehend almost everything out of this published ebook. You won't truly feel monotony at any moment of the time (that's what catalogues are for concerning should you question me).

P = 29yrs-.45719 Uranus PT= 84jrs.02056 Neptune P8=1645, r -.76262 The interval between two successive conjunctions of Jupiter and Saturn is 19.85885 Julian years, or nearly 20 years.-If a conjunction of these two planets takes place when they are in the direction of A from the sun s centre (see diagram), the next conjunction will be when they are in the direction nearly of B, Saturn having described a little more than two-thirds of his orbit. The next conjunction of the same planets after the same interval of 19y .85885, will be when they are nearly in the direction of C, Saturn having moved through a few degrees more than another two thirds of his orbit. The third conjunction, after the same interval of time, will occur when these planets have come around once more nearly to the direction of A from the sun. Thus after three intervening conjunctions, requiring the lapse of three times 19s .85885, or cj1TM-.57655, the planets are together nearly in their first direction, A. In this time Saturn has made a little more than two complete revolutions around the sun. For his period is P6=29yrs .45719. Hence 2 Pc=58yrs-.91438. The triple conjunction period, 59yrs -57655 exceeds two of Saturn s periods by oysr .66217. 1 this fraction of a year Saturn moves through an arc of 8.092. By this arc, therefore, the point of conjunction has advanced beyond A, after the lapse of 59yr .57655, or after three intervening conjunctions....
