Plasma Processing of Polymers (Hardback)

By -

Springer, Netherlands, 1998. Hardback. Condition: New. 1998 ed.. Language: English . Brand New Book ***** Print on Demand *****.Cold-plasma modification of polymers and deposition of thin polymer films is a branch of science characterised by an increasing popularity in the last few years for the large number of new industrial processes which have been realised by its application. Most plasma scientists can attest this through their everyday experience: many technologists, independently of the size of their company address demands for new products in e. g. electronics, automotive components, optics, food and pharmaceutical packaging, biomedical and surgical equipments, etc. The unique common need of this variety of applications is that the products feature surfaces with tailored and unusual properties, which enable their use where otherwise would be impossible to conventional materials. Plasma produced-, or plasma modified-polymers can, in fact, be considered an entirely novel class of materials with tuneable properties showing e. g. chemical inertness or enhanced reactivity, hardness, variable refractive index, hydro-phobicity and -philicity , adhesivity, dyeability, blood compatibility, bacterial infection resistance, etc. The NATO-ASI course on PLASMA TREATMENT AND DEPOSsION OF POLYMERS, held May 19-June 2, 1996, in Acquafredda di Maratea, Italy, has been designed with an effort to...

Reviews

This book might be worth a read, and far better than other. It is rally interesting throgh studying time period. I discovered this book from my i and dad suggested this ebook to find out.

-- **Isobel Bailey**

This book can be worth a read, and far better than other. I could comprehended every little thing using this published e pdf You can expect to like how the blogger publish this pdf.
