Brand New Book ***** Print on Demand *****.Excerpt from Chart to Facilitate the Calculation of Partial Coefficients of Correlation, and Regression Equations In 1916 I published, as Bulletin 27 of the University of Texas, Tables: To Facilitate the Calculation of Partial Coefficients of Correlation and Regression Equations. The present work, in terms of its purpose but not of its method, constitutes a second edition of that work. The preface to the Tables is as follows: The regression equation method has been so laborious, as well as involving such accuracy in and knowledge of statistical method, that it has not been used in many studies in which it alone could evaluate the data in such a manner as to answer the questions involved. It is hoped that the tables here presented have so materially decreased the labor of calculation that the method will be used extensively. If this has been accomplished a second edition will be demanded, and if such is called for two important improvements may be expected: first, that the tables be carried at least two decimal places further and, second, that entries for at least one of the variables be for every .01. instead of as at present for every.01. The shortcomings mentioned are well recognized. The author would be glad to hear of any others discovered by users. That the Tables met a real need has been proven by the early exhaustion of the edition and by the insistent demands for republication. However, certain shortcomings have made it undesirable to republish. These are, first, the labor involved in double interpolation and, second, the presence of cumulative inaccuracies in case the work is not carried to a sufficient number of decimal places...
