Excerpt: . . . an order a 1 for x is then discussed. Finally the case when $K(x, x) = 0$ is considered. In discussing this case the elegant method of Lalesco, which consists in making use of linear differential equations, is applied. The author next considers systems of integral equations and equations containing multiple integrals and shows how the ordinary methods can without serious complications be extended to these cases. A few pages are then devoted to the method of successive approximations as applied to integral equations. Other topics of which a brief discussion is given are generalized equations of the Volterra type, equations where the two limits of integration are variable, and non-linear equations. In Chapter III equations of the Fredholm type $V(x) U(x) - k k(x)$, are discussed. The same method of considering the given equation as the limiting case of a system of algebraic equations is used...
