Createspace Independent Publishing Platform, United States, 2016. Paperback. Book Condition: New. Illustrated. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.The term, Primer Fields refers to electromagnetic structures in space that focus interstellar plasma in concentrated form onto our Sun. Without the Primer Fields the Earth would be in an Ice Age environment. We, ourselves, would likely not exist then. The fields are created by magnetic effects of flowing plasma acting on itself. A threshold must be exceeded for the fields to form. Below it, the fields cannot form. The Sun is powered at a lower level when the Primer Fields are not active. At the inactive state the solar activity is reduced to a type of cosmic default level with 70 less radiated energy. The phase shift starts an Ice Age. At the present rate of diminishment, the solar activity threshold may be reached in 30 years, or in the 2050s, most likely. That's when the interglacial period ends and the greatest Climate Change in recorded history, happens. With the primer system gone inactive, the climate on Earth will get 40 times colder than the Little Ice Age in the 1600s had been. Ice core evidence promise that. Without the needed preparations for human living in such an environment, 99 of humanity would die of starvation, both by the cold and by CO2 depletion as more of it becomes dissolved into the sea. With the fields being critical for our very existence, they have been explored in laboratory experiments. Numerous fields of evidence tell us that the next Ice Age is near. That's where the truth begins. Most of the evidence was discovered in the 1990s and thereafter. Some evidence is measured in ice cores; some is measured in space, by satellites. Some...
