Reviews

Thorough guideline! Its this kind of excellent read. This is certainly for all those who statte there was not a well worth reading. Your way of life period will probably be transform once you complete reading this book.
(Mrs. Alia Borer)

LA VERITE HISTORIQUE REVUE DESTINEE A RETABLIR LES FAITS ALTERES PAR LIGNORANCE OU PAR LA MAUVAISE FOI (2)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 66 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2008 OCLC Number: (OCoLC)256013604 Subject: Photovoltaic cells -- Research. Excerpt: . . . 1 Introduction 1. 1 Background The purpose of this subcontract is to: 1) develop low-temperature deposition methods for polycrystalline thin-film materials and structures that have the potential to produce tandem cells reaching 25 efficiency at AM1.5 while using processes that are compatible with a bottom cell of the chalcopyrite (e. g. , CIS or CIGS) structure, 2) develop in situ spectroscopic ellipsometry for growth diagnostics and deposition control, as well as ex situ characterization using a variety of techniques, and 3) model nonuniformities in tandem structures. This annual report covers the second phase (14 months) of a three-year, NREL High Performance PV Phase IB, High Performance PV - Exploring and Accelerating Ultimate Pathways, subcontract XAT-4-33624-06 with The University of Toledo. 1. 2 Objectives of this subcontract A primary objective is to optimize low-temperature magnetron sputter deposition and post-deposition processing conditions for CdTe-related II-VI polycrystalline thin films. The materials emphases are being placed on CdMnTe and CdMgTe for top cells including exploration of their suitability for the substrate configuration needed for two-terminal devices when CIS is grown first. Low-temperature magnetron sputter deposition is likely to be a prime consideration for top cells fabricated on bottom cells such as CIS, which are known to deteriorate at elevated temperatures. A ZnO-based high resistivity transparent (HRT) layer was studied for use with a thin CdS layer and the CdTe-based layers. Other effort focused on fabricating and modeling tunnel recombination junctions suitable for the II-VI alloy top cell - with a chalcopyrite bottom cell. During Phase Two effort was...
