PERFORMANCE EVALUATION OF AD HOC ROUTING PROTOCOLS FOR VANETS

By Khan, Imran

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | USING BI-DIRECTIONALLY COUPLED SIMULATOR | Vehicular Ad hoc Network (VANET) is a new communication paradigm that enables the communication between vehicles moving at high speeds on the roads. This has opened door to develop several new applications like, traffic engineering, traffic management, dissemination of emergency information to avoid hazardous situations and other user applications. In this thesis, the performance analysis of proactive and reactive routing protocols in both urban and highway scenarios is presented. The simulations performed for this analysis are of two types; bi-directionally coupled simulations and offline simulations. In both types, urban and highway scenarios are simulated. In bi-directionally coupled simulations, network and traffic simulators are integrated at runtime to exchange different commands. This thesis is the first research effort that integrates both network and traffic simulators at runtime. This integration helps in modeling emergency scenarios on roads like accidents, etc. In offline simulations, real world maps are used to model urban and highway topologies. | Format: Paperback | Language/Sprache: english | 84 pp.

Reviews

Extensive manual for book fans. It really is simplified but surprises inside the fifty percent of your pdf I realized this pdf from my dad and i advised this pdf to discover.

-- **Geoffrey Wiza**

This pdf is very gripping and fascinating. We have read and that i am certain that i am going to going to read once more again in the future. Once you begin to read the book, it is extremely difficult to leave it before concluding.
