Springer. Paperback. Condition: New. 238 pages. Dimensions: 9.2in. x 6.1in. x 0.6in. This Conference on biomedical applications of lasers was organized by the Quantum Electronics Divisional Board of the European Physical Society (E. P. S.) and held at the Villa of Poggio Imperiale in Florence, September 3-6, 1979. As known, laser surgery (especially microsurgery and endoscopic photo coagulation) has recently made important progress, and the field is expanding rapidly. Very significant applications of lasers have also been achieved in Biology during recent years (cell microsurgery, cell counting and sorting, cytofluorimeter devices, etc.) and the potential of laser techniques in this field is not sufficiently well established. A new class of applications of laser radiation in Medicine has recently been made possible by important results obtained with low intensity (non coagulative) visible lasers, such as photodynamic therapy of tumors. At the same time important branches of Medicine, where light effects are studied and optical techniques are presently used for a certain number of clinical applications, such as dermatology and pediatrics, appear to be still in their infancy as far as the proper use of optical radiation and techniques, and the understanding of fundamental photoinduced biological processes are...
