Forgotten Books. Paperback. Condition: New. This item is printed on demand. 160 pages. Dimensions: 9.0in. x 6.0in. x 0.3in. Excerpt from Introduction to the Science, Vol. 1 The present volume, while calculated also for private and self-instruction, is chiefly designed to occupy that part of the attention of young persons at school, which has hitherto been devoted to the earliest of the usual series of Collections. Not less intelligible than the simplest of that class of school-books, it possesses the advantage of a definite and most important object, inasmuch as it presents a connected and systematic view of Nature. The sciences treated of are Astronomy - Natural Philosophy - Geology and Physical Geography - Meteorology - Electricity and Magnetism - Chemistry - Botany - Zoology - Human Physiology - and Mental Philosophy, upon each of which a series of questions is given at the end of the work. The amount of information on each is necessarily not great; but it has been the ambition of the writer that the information given should not be a superficial view of a few unconnected phenomena, but a chain of principles, calculated, in combination, to impress a distinct and comprehensive idea, and to make it possible that even those who leave school at the early age of ten, shall not go into the world without some knowledge of the parts of which it is composed, and the laws by which it is regulated. For the completion of a right elementary education, it is of course deemed necessary by the Editors, that each of the sciences here treated, besides several others, be studied separately, at least to the extent in which they are treated in the respective volumes of Chamberss Educational Course. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more...
