

Alternate Clear-Strip Cutting in the Lodgepole Pine Type (Classic Reprint) (Paperback)

By Bert Lexen

FBC LTD, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Alternate Clear-Strip Cutting in the Lodgepole Pine Type Experiment Stationopine is an extremely aggressive species and on all experimental strip cuttings has regenerated uniformly throughout the clear-strip and along the edges of the uncut strips as well. The density and over-all uniformity of reproduction on clear-strips should ultimately make the retracing of strips rather simple. The objection to the system because a long time must elapse between harvests in the same locality holds as well for lodgepole pine as it does for European species of pine. Alternate clear strip cutting is, nevertheless, one step better in this respect than the present system of complete clear-cutting which makes the period between harvests equal to the rotation; moreover, as will be shown later, the system can be modified to shorten still further the time when cutting operations can once again resume on previously cut-over areas.
