Cambridge Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.The more I examine its architecture, the more evidence I find that the universe in some sense must have known we were coming. Midway through the last century, a few of mankind's brightest minds got together over lunch, to seriously discuss a question, which until then, had been largely relegated to the realm of science fiction. The question was, where is everybody? Asked on a cosmic scale. In a galaxy vast enough to encompass a hundred million black holes and a thousand times that many burning stars, we expect to see some signs of life beyond this little blue dot we stand on. Since that lunchtime chat among physicists, we have extended our reach beyond the solar wind's farthest traces. And our sight all the way to our universe's horizon. But despite the staggering biodiversity here on Earth, we have yet to encounter a single piece of evidence that says that we are not alone. So, are we an anomaly? A lonely group of chance biological specimens alone in a blind and deaf universe of rock and ice and gas? By its definition and anomaly is unlikely and should not be assumed. But the possible reasons we have not yet sensed an alien presence range from the terrifying to the sublime. Where are the others? And why can't we find them? The answer will be mankind's most important discovery. And so we search hoping with each passing decade to observe something that might give us an answer.
