Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: .Therefore, to find any root of a monomial, RULE. Extract the required root of the coefficient, divide the exponent of each letter by the index of the root, and prefix to the result the proper sign. Note 1.--If the coefficient of the given quantity is not an exact power of the given root, indicate the result; thus, Note 2.--To find any root of a fraction, extract the required root of both terms. EXAMPLES. Find the values of the following: 26. Show that $y^m p^q s^r = y^m y^{-oo}$ 27. Show that $v^y s^3 = v^7 a^2$. From Examples 24-27 it is seen that in general the with root of the nth root equals the nth root of the mth root. SQUARE ROOT OF POLYNOMIALS. 168.-1. Find the square root of $a^2 + 2afc + b a + 2ab + b^2! a + b$, From the method of squaring a poly a2 j Ans. nomial (A . 157), the first term, a^2 , is $2a + b$ ($Zab +$ No the square of the first term of the root; $2ab + 68$ hence the first term cf the root is the square root of a^2 , which is a . Subtracting its square from the polynomial, we have $2ab + b^2$ remaining. The first term of this remainder is equal to twice the first term of the root into the second; hence we can find the second term of the root by dividing $2ab$ by $2(7$, which...
