BUILDING WEB APPLICATIONS WITH VISUAL STUDIO 2017: USING .NET CORE AND MODERN JAVASCRIPT FRAMEWORKS (PAPERBACK)

aPress, United States, 2017. Paperback. Condition: New. 1st ed.. Language: English . Brand New Book. Learn how to build web applications from three Microsoft MVPs. After building the data application layer using Entity Framework Core and a RESTful service using Core, you will then build the client side web application three ways: first, using Core, then using Angular 2, and, finally, using React. You will be able to compare and contrast these UI frameworks and select the best one for your Core is a complete rewrite of the popular and its related frameworks. While many concepts are similar between Core and the 4.6 framework, there are revolutionary changes as well, including updates to Entity Framework Core and Core. The first section of this book covers the three main parts of building applications with C#: Entity Framework, Core Services, and Core Web Applications. There is also an explosion in popularity of JavaScript frameworks for client side development, and the authors cover two of the most popular UI frameworks. Start with TypeScript for developing clean JavaScript, along with a client side build tool such as Gulp, Grunt, and WebPack. Using the same data access layer and RESTful service from the Core application, you can rebuild the UI using Angular 2. Then, repeat the process using React, for a true comparison of building client side applications using Core, Angular 2, and React. What You ll Learn Understand the fundamentals of Core and what that means to the traditional developer Build a data access layer with Entity Framework Core, a RESTful service with Core MVC, and a website with Core MVC and Bootstrap Automate many build tasks with client side build utilities Who This Book Is For Intermediate to advanced developers.
