Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.An excerpt from the beginning of the second chapter: II. ON THE CONSTRUCTION OF THE TABLES OF MELPOMENE. BEFORE entering into the details of the construction of the tables, I would take the liberty of making some general remarks on the treatment of asteroids at the present time. After two oppositions it is possible to determine the elements of an asteroid near enough the truth for computing the perturbations, and I think those by Jupiter are sufficient for our present purposes. Three oppositions, then, admit the more accurate determination of the elements, and after about eight oppositions they can be finally corrected for the computation of the general perturbations of the first order by Jupiter. Preliminary tables constructed upon them will give, for the next fifty years, the ephemeris near enough to find the planet, and for forming normal places. After that, a computer can do something definite; then he may compute the perturbations of the second order by using those known of the first order, or he may find it necessary to recompute the first order with the elements...
