

Tables Requisite to be Used with the Nautical Ephemeris, for Finding the Latitude and Longitude at Sea: Published by Order of the Commissioners of Longitude

By Nevil Maskelyne

Cambridge Library Collection, United Kingdom, 2014. Paperback. Book Condition: New. 234 x 154 mm. Language: English . Brand New Book. Successful long-distance navigation depends on knowing latitude and longitude, and the determination of longitude depends on knowing the exact time at some fixed point on the earth's surface. Since Newton it had been hoped that a method based on accurate prediction of the moon's orbit would give such a time. Building on the work of Euler, Thomas Mayer and others, the astronomer and mathematician Nevil Maskelyne (1732-1811) was able to devise such a method and yearly publication of the Nautical Almanac and Astronomical Ephemeris placed it in the hands of every ship's captain. First published in 1767 and reissued here in the revised third edition of 1802, the present work provided the necessary tables and instructions. The development of rugged and accurate chronometers eventually displaced Maskelyne's method, but navigators continued to make use of it for many decades. This edition of the tables notably formed part of the library of the Beagle on Darwin's famous voyage.

Reviews

This written pdf is great. It is really simplistic but surprises within the 50 percent of the pdf I realized this pdf from my dad and I advised this pdf to understand.

-- Mr. Milford Jakubowski IV

The ebook is straightforward in read easier to recognize. It is actually written in basic phrases and not difficult to understand. You can expect to like just how the author compose this book.
