Most of the exposures are in the northern part of the state relatively distant from ready markets. This makes it difficult for the Michigan burners to compete in the southern more populous portion of the state with lime producers in northern Ohio, Indiana, and Illinois, situated near cheap coal fuel supplies. Concrete mortar is more easily and rapidly handled than stone and lime mortar and has largely displaced these materials in the building trades. For similar reasons gypsum wall plasters and plaster board have largely displaced sand-lime mortar for plastering. Much of the lime produced is of the hot variety but considerable mild magnesian lime is burned at Manistique, Marblehead, . Petoskey and Bay Shore. Hydrated lime is produced at Afton, and Manistique. The total production in 1916 was 86,477 tons valued at \$385,341 as compared with 81,359 tons valued at \$349,979 in 1915. This was a net increase of 6.2 per cent in quantity and 10.1 per cent in value. The average price in 1916 was \$4.45 per ton or.16 per ton more than in 1915.
