World Scientific Publishing Co Pte Ltd. Paperback. Condition: new. BRAND NEW, At the Leading Edge: The ATLAS and CMS LHC Experiments, Dan Green, Simon Mugford, Too often descriptions of detectors focus on the what and not the why. This volume aims to elucidate how the requirements of the physics at the Large Hadron Collider (LHC) define the detector environment. In turn, the detector choices are made to adopt to that environment. The goal of LHC physics is to explore the mechanism for electroweak symmetry breaking. Because of the minuscule cross-sections which need to be explored, 0.1 fb , the LHC needs to provide $100 \text{ fb}^{-1}/\text{yr}$, or an instantaneous luminosity of $10^{34} / (\text{cm}^2 \text{ sec})$. With a bunch crossing interval of 25 nsec , well matched to detector speeds, there will be 25 events occupying each bunch crossing. Thus the physics requires fast, finely segmented, low noise and radiation resistant detectors which provide redundant measurements of the rarely produced electrons and muons. To achieve those goals, new ground was broken in constructing the A Toroidal LHC Apparatus (ATLAS) and Compact Muon Solenoid (CMS) detectors in the vertex detectors, tracking systems, calorimetry, strong magnets, muon systems, front end electronics, trigger systems, and in the data acquisition methods used.
