Not illustrated. 1913 Excerpt: .diameter and the diaphragm in the smokebox 23 inches high. A banked fire was used and the firedoor was closed when not firing. 29. Diaphragm in smokebox changed from 23 inches to 205 inches high. Banked fire and firedoor closed. 30. The heater pipe nozzles were then pointed directly forward along the side sheets. Banked fire and firedoor closed. 31. The Parsons Combustion System was then removed entirely, July 27th, 1909, to make standard grate arrangement tests. These tests were made with a level fire and firedoor on the latch. The 160-25-F test resulted as follows: 32. The Parsons Combustion System was again placed on the locomotive on August 16th and the diaphragm set at 17 inches. A test was made with banked fire and firedoor on latch, when necessary, with results as follows: 33. The steam jets were then used to syphon more air into ...
