QUANTUM CHEMICAL STUDIES ON ATOMIC-SCALE TRIBOLOGY

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | of Diamond and Boron Nitride | In this thesis quantum chemical methods have been applied to study the tribology of methylated diamond and cubic and hexagonal boron nitride. Interaction energies between surfaces have been calculated from which friction coefficients are derived. The influence of the size and the nature of the model representing the surface have been examined. The use of periodic models for friction studies has advantages. Periodic models circumvent the difficulties typical to cluster models and produce friction..
