Reviews

An incredibly wonderful ebook with perfect and lucid explanations. I really could comprehend every little thing using this written publication. It is extremely difficult to leave it before concluding, once you begin to read the book.

New Age International (P) Limited, 2012. Softcover. Condition: New. 2nd edition. The book provides a lucid and step-by-step treatment of the various principles, methods and instruments involved in land surveying. Modern methods and techniques are emphasised throughout the text. After presenting the basic concepts and definitions, the book explains errors in survey measurement and their propagation. Survey measurements are detailed next. These include horizontal and vertical distances, slope, elevation, angle and direction. Measurement using stadia tacheometry is then highlighted, followed by contouring and uses of contours in civil engineering projects. Traversing is then explained, followed by a detailed discussion of plotting of maps by plane tabling. The use of tangent clinometer in plane tabling has been suitably highlighted. The book then explains the calculation of areas and volumes from the survey measurements. The last chapter features various types of curves and includes a variety of field problems in setting out the curves. Suitable diagrams, illustrative examples and practice problems are included throughout the book. The book would serve as an excellent text for degree and diploma students of civil engineering, AMIE candidates, and practicing engineers would also find this book extremely useful. Contents: Introduction and Basic Concepts Survey Measurements, Error and Propagation of Errors Measurements of Horizontal Distances Measurements of Angles and Directions Chain and Compass Surveying Levelling Contouring Tacheometry Traverse Surveying Plane-Table Surveying Areas and Volumes Horizontal and Vertical Curves Answers to Numerical Problems Printed Pages: 602.
