Excerpt from Proceedings of the London Mathematical Society, 1904, Vol. 1 But the work in which Cremona displayed most brilliantly his great intellectual powers and his artistic temperament, and his wide and profound knowledge of geometry, is the Introduzione ad una teoria geometrica delle curve piane, published in 1862 (mem. Acc. Bologna, xn. Afterwards translated into German by Curtze and into Czech by Weyr. In 1852 had appeared the first edition of the celebrated book by Salmon setting forth the theory of plane curves, treated by methods very various in character, but in the main analytical and connected with the theory of invariants of algebraic forms. The object which Cremona proposed to himself in his treatise, on the other hand, was to prove all the known results (in particular the very important ones which had merely been enunciated by Steiner) and new ones in addition, making use of pure geometry only. It may perhaps be said that the title of pure geometry in this connexion is not an absolutely correct one; for the geometrical method followed by him, though it proceeds synthetically in...
