

Effect of clearance on friction and lubrication of hip implants

Filesize: 4.59 MB

Reviews

Merely no phrases to describe. Better then never, though i am quite late in start reading this one. Its been written in an extremely easy way which is merely following i finished reading this publication through which in fact transformed me, change the way in my opinion.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Biotribology of Birmingham Hip Resurfacing Implants with various clearances using blood and serum based lubricants | Friction and lubrication behaviour of 50mm diameter Birmingham Hip Resurfacing implants with diametral clearances 80 to 300µm, using blood (clotted and whole blood), a combination of bovine serum with hyaluronic acid and carboxymethyl cellulose (CMC) adjusted to a range of viscosities (0.001-0.2 Pas), and bovine serum with CMC adjusted to a similar range of viscosities, have been investigated. The result of this investigation has suggested strongly that the optimum clearance for the 50 mm diameter MOM BHR implants to be 150µm and 0.2) and be able to accommodate a mixed lubrication mode and hence lower the risk of micro- or even macro-motion specially immediately after hip implantation. These suggested optimum clearances will also allow for low friction (i.e. friction factors of 0.2-0.07) and reasonable lubrication (dominantly mixed regime) for the likely cup deflection occurring as a result of press-fit fixation. | Format: Paperback | Language/Sprache: english | 292 pp.
