IMAGE PROCESSING, ANALYSIS AND MACHINE VISION

Cengage Learning EMEA, United Kingdom, 1993. Paperback. Book Condition: New. 1993 ed.. 232 x 176 mm. Language: English . Brand New Book ***** Print on Demand *****.Image Processing, Analysis and Machine Vision represent an exciting part of modern cognitive and computer science. Following an explosion of interest during the Seventies, the Eighties were characterized by the maturing of the field and the significant growth of active applications; Remote Sensing, Technical Diagnostics, Autonomous Vehicle Guidance and Medical Imaging are the most rapidly developing areas. This progress can be seen in an increasing number of software and hardware products on the market as well as in a number of digital image processing and machine vision courses offered at universities world-wide. There are many texts available in the areas we cover - most (indeed, all of which we know) are referenced somewhere in this book. The subject suffers, however, from a shortage of texts at the elementary level - that appropriate for undergraduates beginning or completing their studies of the topic, or for Masters students - and the very rapid developments that have taken and are still taking place, which quickly age some of the very good text books produced over the last decade or so. This book reflects the authors experience in teaching one and two semester undergraduate and graduate courses in Digital Image Processing, Digital Image Analysis, Machine Vision, Pattern Recognition and Intelligent Robotics at their respective institutions.
