Reviews

It is one of the most popular publications. It really is filled with knowledge and wisdom. It has been designed in an exceedingly straightforward way and it is merely soon after I finished reading this pdf by which it actually transformed me, affecting the way in my opinion.

Not illustrated. 1916 Excerpt: . . . 2Jan, and the th root of the general term of this last series, or R_n , approaches zero as n increases indefinitely. t Therefore we can always choose the integer v so that the infinite product $F_t(z)$ will be absolutely and uniformly convergent in the circle of radius R . Such a product can be replaced by the sum of a uniformly convergent series (176, 2d ed.) whose terms are all analytic. Hence the product $F_t(z)$ is itself an analytic function within this circle (39). Multiplying $F_t(z)$ by the product F_z , which contains only a finite number of analytic factors, we see that the infinite product is itself absolutely and uniformly convergent in the interior of the circle C with the radius R , and represents an analytic function within this circle. Since the radius R can be chosen arbitrarily, and since For example, let $a \log n(i2)$. The series whose general term is $(\log n)^{-p}$ is divergent, whatever may be the positive number p , for the sum of the first $(i-1)$ terms is greater than $(n-l)(\log n)^p$, an expression which becomes infinite with n . t Borel has pointed out that it is sufficient to take for v a number such that r_1 shall be greater than $\log n$. In fact, the series 2^{-nl} is convergent, for the general term can be written $e^{k \log n}$ for some k . After a sufficiently large value of n , anR will be greater than e^2 , and the general term less than...
