Milking Machine as a Factor in Dairying: A Preliminary Report, Practical Studies of a Milking Machine, Bacteriological Studies of a Milking Machine (Classic Reprint) (Paperback)

By Clarence Bronson Lane

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Milking Machine as a Factor in Dairying: A Preliminary Report, Practical Studies of a Milking Machine, Bacteriological Studies of a Milking Machine With this machine the milk is drawn by intermittent suction The suction may be created by either a vacuum pump or a steam ejector. Connected with the vacuum pump is a vacuum reservoir and a pipe running the whole length of the cow stable, with a connection valve or vacuum cock between each pair of cows. A safety valve is connected to the reservoir to prevent the vacuum from running higher than is desired. The machine itself (pl. 4, fig. 1) consists of a heavy tin pail, which is cone-shaped and holds about 55 pounds of milk. The cover of this pail is a disk, in which is a vacuum motor which produces the pulsations in drawing the milk from the teats. The cover fits the pail tightly and excludes all air.
