

High-speed indexing and archival of network measurement data

Filesize: 2.25 MB

Reviews

This published book is wonderful. It is really simplified but unexpected situations within the fifty percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Dr. Janis Reilly)

HIGH-SPEED INDEXING AND ARCHIVAL OF NETWORK MEASUREMENT DATA

Shaker Verlag Nov 2012, 2012. Taschenbuch. Condition: Neu. Neuware - The Internet has become a global IT infrastructure providing ubiquitously accessible, interactive, and secure services used by a large fraction of the global population. To meet users' expectations, network administrators require sophisticated monitoring infrastructures for detecting misconfiguration and faults, for measuring the performance, and for enabling timely reactions to security threats. Passive monitoring has rapidly become the de-facto monitoring approach for getting deep insights into the actual status of production networks. Nowadays networks rely on network probes, which are embedded in network equipments or deployed as special purpose monitoring devices, that constantly monitor important network aspects. Therefore, current monitoring infrastructures are able to create large volumes of monitoring data. Industrial and academic research mostly focused on the generation, collection, processing and analysis of network monitoring data streams with the primary goal of providing live views of diverse network aspects. These efforts have led to mature technologies for processing high-speed data streams in real-time. Nowadays, stream processing represents the foundation for the large majority of software and hardware based monitoring infrastructures deployed for operating current production networks. In a nutshell, the stream processing approach consists of applying a predefined set of queries to one or more data streams in a way that summaries of the data are continuously computed. This approach allows one to have a predefined set of information about the network streams without requiring the streams to be entirely recorded, hence the name single-pass analytics. Unfortunately, this also means that the information not captured by the current query set is lost forever. In many emerging contexts including, but not limited to, cyber-security, this trade-off is undesirable. In particular, large corporations, financial institutions and high-security data centers are increasingly interested in efficient solutions enabling the collection of exact data streams,...
