Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Marine Flora and Fauna of the Northeastern United States: Higher Plants of the Marine Fringe This issue of the Circulars is part of a subseries entitled Marine Flora and Fauna of the Northeastern United States. This subseries will consist of original, illustrated, modern manuals on the identification, classification, and general biology of the estuarine and coastal marine plants and animals of the Northeastern United States. Manuals will be published at irregular intervals on as many taxa of the region as there are specialists willing to collaborate in their preparation. The manuals are an outgrowth of the widely used Keys to Marine Invertebrates of the Woods Hole Region, edited by R. I. Smith, published in 1964, and produced under the auspices of the systematics-ecology Program, Marine Biological Laboratory, Woods Hole, Mass. Instead of revising the Woods Hole Keys, the staff of the Systematics Ecology Program decided to expand the geographic coverage and bathymetric range and produce the keys in an entirely new set of expanded publications. The Marine Flora and Fauna of the Northeastern United States is being prepared in collaboration with systematic specialists in the United States and abroad. Each manual will be based primarily on recent and ongoing revisionary systematic research and a fresh examination of the plants and animals. Each major taxon, treated in a separate manual, will include an introduction, illustrated glossary, uniform originally illustrated keys, annotated check list with information when available on distribution, habitat, life history, and related biology, references to the major literature of the group, and a systematic index. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of..
