PHOTORECEPTOR OPTICS

Condition: New. Publisher/Verlag: Springer, Berlin | The above consideration indicates that at present many of the experimental facts on PS in animals can be quantitatively explained within the limits of the "universal" photoreceptor membrane concept. Of course, existence of preferential orientation of the absorbing dipoles in the tubuli of the rhabdomeres can not be totally rejected. We hope that the concept of the "universal" photoreceptor membrane may serve as the useful instrument when dealing with newly discovered properties of...
