THE PATHOLOGY OF THE ENDOCRINE PANCREAS IN DIABETES

Springer. Paperback. Condition: New. 336 pages. Dimensions: 9.6in. x 6.7in. x 0.8in. Diabetes mellitus represents one of the most frequent and serious clinical syndromes in contemporary medicine. Since the end of the nineteenth century, the endocrine pancreas has been implicated in the pathogenesis of this disease. Several pathologists of the twentieth century detected various lesions and morphologic alterations in the pancreatic islets of diabetic patients, but the pathophysiologic basis of their findings remained long obscure. The systematic microscopic work of WILLY GEPTS clarified the views and related the variety in histopathology to differences in origin, duration and clinical expression of the disease. Over the past two decades, the concept of a multifactorial origin of diabetes has become widely accepted. Various agents and mechanisms have been identified which can lead to a quantitative or qualitative deficit in pancreatic B-cells. The purpose of this book is to bring an update on the many pathways which may induce an absolute or relative insufficiency in insulin release and hence a diabetic state. Rather than bringing a complete account on all research relevant to the understanding of the pathology of the diabetic pancreas, the authors of the various chapters of this volume have focussed on selected processes which can impair B-cell function, survival or regeneration. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
