Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Manurial Requirements of the Leonardtown Loam Soil of St. Mary County, MD During the summer of 1904 a party was sent to Leonardtown to carry on investigations on different phases of the Leonardtown loam and to ascertain if the wire-basket method which had recently been devised for a study of the fertility of soils was sufficiently perfected to make it of practical use. The results obtained during the summer demonstrated that the method was capable of showing the same order in the crop-producing power of the soils as was observed in the field, and that it was also useful in determining what fertilizing materials would give the best returns. The facts gathered during the summer were thoroughly in accord with what had been previously observed in making a soil survey of this county and also with the experience of the more progressive farmers. In 1905 samples were taken from two phases of the Leonardtown loam. The sample designated good was taken from a field in a high state of cultivation located within the borders of Leonardtown. For quite a number of years this field had received annually liberal applications of stable manure. It was then put down to grass and remained for five or six years, when the grass ran out. In the spring of 1903 the field was plowed and planted to corn without the application of manure or any kind of fertilizer. The result was a fine crop of corn, estimated at about 80 bushels per acre. The following year, 1904, it was again plowed and planted to corn without fertilizer, but there was a marked falling off in the crop, which may...
