Forgotten Books, 2018. Hardback. Condition: New. Language: French . Brand New Book ***** Print on Demand *****.Excerpt from Recherches Histologiques sur les Mollusques Lamellibranches Le difficile etait alors d expliquer cette erection du pied. M. Ray Lankester, dans une courte note a ecrit que l afflux, dans les lacunes pedieuses, du sang chasse des lacunes palleales et periviscerales, suffisait pour produire la turgescence. Et tout recemment, M. Fleischmann, dans un memoire (6) consacre a cette etude, apres avoir evalue rigoureusement la quantite de sang renfermee dans les lacunes du corps et celles du pied pen dant la turgescence et pendant la contraction, est arrive aux memes conclusions que Ray Lankester. Le fait parait donc bien demontre aujourd hui. Mais si l en a suivi l historique, resume a grands traits et que l on trou vera plus etendu dans les memoires de th. Barrois et de Schie menz, des discussions auxquelles ces recherches ont donne lieu, on s aperçoit que tous les naturalistes precites ont seule ment etudie le pied. Tous leurs travaux portent sur la question de savoir si le pied est, oui ou non pourvu d orifices aquiferes, les autres organes etant laisses de cote. A peine quelques zoole gistes se sont - ils demande si cette introduction d eau ne pour rait pas s effectuer par le corps de Bojanus, et aucune recherche physiologique suivie n a encore ete entreprise dans ce sens.
