

Modeling of Thermodynamic Properties in Biological Solutions

Filesize: 7.54 MB

Reviews

This book will never be easy to start on looking at but quite entertaining to read. It is actually packed with wisdom and knowledge It is extremely difficult to leave it before concluding, once you begin to read the book.

(Ms. Missouri Satterfield DVM)

MODELING OF THERMODYNAMIC PROPERTIES IN BIOLOGICAL SOLUTIONS

[DOWNLOAD](#)

Cuvillier Verlag Jan 2009, 2009. Taschenbuch. Condition: Neu. Neuware - More than 90% of the production costs for amino acids, peptides, and proteins are attributed to their purification. Therefore, reliable information about phase behavior of biological systems is of essential financial importance for the design of separation units. In general, bioproducts are obtained by fermentation in aqueous solutions that may also contain electrolytes. The phase behavior of such solutions is particularly dependent on salt type, ionic strength, and pH In this thesis a model based on the PC-SAFT equation of state is developed for the description of thermodynamic properties of aqueous electrolyte solutions. This model is also applied for aqueous amino acid and peptide systems. The aim is to simultaneously describe various system properties - densities, vapor pressures, activity coefficients, and solubilities - with a minimum number of adjustable model parameters. After successful modeling of the binary systems, ternary water/electrolyte/amino acid systems are investigated. Additionally, the meta-stable liquid-liquid coacervation in protein solutions as well as the second osmotic virial coefficients, system densities, and solubilities of proteins are scrutinized based on aqueous hen egg-white lysozyme/NaCl solutions. Both, the PC-SAFT model and a model based on potential of mean force (PMF) are tested for their applicability regarding such complex mixtures. It is shown that the PC-SAFT approach fails in the description of protein solutions whereas the PMF ansatz yields, at least, good qualitative agreement between model and experiment. All models used for this thesis were implemented in Fortran. The evaluation of data was carried out with Matlab®. 137 pp. Englisch.
