

Photoelectrochemical Hydrogen Production

Filesize: 9.27 MB

Reviews

It is one of the most popular publications. It really is filled with knowledge and wisdom. It has been designed in an exceedingly straightforward way and it is merely soon after I finished reading this pdf by which it actually transformed me, affecting the way in my opinion.

(Gerardo Rath)

PHOTOELECTROCHEMICAL HYDROGEN PRODUCTION

To read **Photoelectrochemical Hydrogen Production** PDF, make sure you click the button below and save the file or have access to additional information which might be in conjunction with PHOTOELECTROCHEMICAL HYDROGEN PRODUCTION book.

Condition: New. Publisher/Verlag: Springer, Berlin | Describing the principles and materials challenges inherent in converting sunlight into hydrogen, readers will find analysis of semiconducting photoelectrodes and a number of experimental techniques for investigating both materials and device performance. | Photoelectrochemical Hydrogen Production describes the principles and materials challenges for the conversion of sunlight into hydrogen through water splitting at a semiconducting electrode. Readers will find an analysis of the solid state properties and materials requirements for semiconducting photo-electrodes, a detailed description of the semiconductor/electrolyte interface, in addition to the photo-electrochemical (PEC) cell. Experimental techniques to investigate both materials and PEC device performance are outlined, followed by an overview of the current state-of-the-art in PEC materials and devices, and combinatorial approaches towards the development of new materials. Finally, the economic and business perspectives of PEC devices are discussed, and promising future directions indicated. Photoelectrochemical Hydrogen Production is a one-stop resource for scientists, students and R&D practitioners starting in this field, providing both the theoretical background as well as useful practical information on photoelectrochemical measurement techniques. Experts in the field benefit from the chapters on current state-of-the-art materials/devices and future directions. | Part I: Basic Principles: Introduction.- Principles of Photoelectrochemical Cells.- Photoelectrochemical Measurements.- Part II: Materials Properties and Synthesis: Nanostructured $\text{-Fe}_2\text{O}_3$ Photoanodes.- Mixed Metal Oxide Photoelectrodes and Photocatalysts.- Combinatorial Identification and Optimization of New Oxide Semiconductors.- Part III: Devices and Device Characterization.- Multijunction Approaches to Photoelectrochemical Water Splitting.- Part IV: Future Perspectives.- Economic and Business Perspectives.- Emerging Trends in Water Photoelectrolysis. | Format: Paperback | Language/Sprache: english | 239x154x17 mm | 324 pp.
