

Enhancing the NS-2 Network Simulator for Near Real-Time Control Feedback and Distributed Simulation Breaks

By John S. Weir

BiblioScholar. Paperback. Condition: New. 104 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. A network simulator coupled with a visualization package enables the human visual system to analyze the results of network modeling as a supplement to analytical data analysis. This research takes the next step in network simulator and visualization suite interaction. A mediator (or run-time infrastructure (RTI) in the literature) provides researchers the potential to interact with a simulation as it executes. Utilizing TCP/IP sockets, the mediator has the capability to connect multiple visualization packages to a single simulation. This new tool allows researchers to change simulation parameters on the fly without restarting the network simulation. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
