No continuous moraine exists here, only scattered ice-borne boulders. Many boulders are in process of breaking up; others have already disintegrated into granite sand. The fragments at the base of the large boulders are spalls split from it by frost action. for them, one must have some conception of the extent of the earlier ice in the Sierra Nevada and also a knowledge of the habits of glaciers and the manner in which they adjust their movements to different types of topography. That the moraines of the Glacier Point Stage are much older than the moraines of El Portal Stage is readily evident from the foregoing. Even if it be granted that the relative scantiness of the Glacier Point deposits may be due to the shorter duration of the Glacier Point Stage as compared with El Portal, it is manifest...
