

Jets from Stars and Galactic Nuclei

Filesize: 9.14 MB

Reviews

I actually started reading this article ebook. I have got read and so i am certain that i will going to study once more yet again in the future. I am just very happy to inform you that this is the finest publication we have read in my personal lifestyle and may be he finest ebook for ever.

JETS FROM STARS AND GALACTIC NUCLEI

[DOWNLOAD](#)

Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of a Workshop Held at Bad Honnef, Germany, 3-7 July 1995 | Jets are ubiquitous in the Universe, but ill-understood. Conservative books base their interpretations on focused stellar winds, ejected "bullets", black-hole central engines, and in-situ upgrating of electron energies via shocks. This volume, however, attempts a uniform interpretation of the bipolar-flow family, involving extremely relativistic pair plasma as the jet substance, and rotating magnets (possibly burning disks) as the central engines. Among the discussed sources are SS 433, YSO jets, planetary nebulae, our galactic center, and the class of extragalactic QSOs, both radio-loud and radio-quiet. | Jets from stars and burning disks.- Black hole, jet, and disk: The universal engine.- Simple sums on burning discs.- Coherent emission and intraday variability of active galactic nuclei.- Particle acceleration in extended radio sources-A critical review.- Plasma acceleration and jet formation by a magnetized rotator.- The astrophysical plasma gun.- Magnetized accretion-ejection structures.- Jet formation in astrophysical converging flows.- Observational properties of jets from young stars.- Near-infrared imaging in H₂ of molecular (CO) outflows from young stars.- The jets in SS 433.- The SS 433 system.- Southern hemisphere VLBI observations of GRO J1655-40.- Jets in planetary nebulae.- Supermassive binaries and extragalactic jets.- Accretion and jet power.- Jets and QSO spectra.- An interpretation of radio-loud-radio-quiet QSO differences.- Jets in gamma-bright AGN: Constraints on reprocessing mechanisms.- Spectral evolution along the jet of M 87 and 3C 273.- X-ray observations of Cen A.- Superluminal sources.- The sub-parsec-scale structure and evolution of the jet in centaurus A.- The central engine in the galactic nucleus.- Our galactic center.- The missing X-rays in SGR A : Evidence for a supermassive black hole in the galactic center.- Numerical simulations of supersonic jets: The cocoon emission. | Format: Paperback | Language/Sprache: english | 474...
