Mistakes are often made during first attempts because some of the fire effects are not obvious at the time of the fire. In particular, the scorching of the crowns does not become apparent until days or even weeks after the fire. Using these estimates the fire manager can adjust the fire as described and achieve the desired objectives with minimal damage to the stand. Ignoring these details will often lead to needless damage. Burning when the 0 to 1-inch fuels are within the recommended range will yield fires that are effective and safe. Selecting a duff moisture content of the right value will give the added benefit of removing the desired amount of the duff layer.
