To download **Monitoring Ruffed Grouse in the Black Hills: Protocol and Users Manual for the Occupancy Spreadsheet Program** eBook, make sure you refer to the button beneath and download the document or have access to other information which are have conjunction with MONITORING RUFFED GROUSE IN THE BLACK HILLS: PROTOCOL AND USERS MANUAL FOR THE OCCUPANCY SPREADSHEET PORGRAM book.

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 40 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. Monitoring ruffed grouse (*Bonasa umbellus*) in the Black Hills National Forest is a priority for forest managers due to the birds status as the management indicator species for quaking aspen (*Populus tremuloides*) and its value to hunters and other recreational groups. We conducted drumming surveys, estimated occupancy, and assessed the influence of sampling and site variables to determine benchmark levels of precision for ruffed grouse occupancy and detection probability estimates. Using these estimates and simulations, we developed a monitoring protocol for ruffed grouse in the Black Hills. We then created a user-friendly program that uses monitoring data in Microsoft Excel to calculate ruffed grouse occupancy and detection probability estimates. (The program is available at <http://www.fs.fed.us/rmforest-grassland-labproducts/ruffed-grouse-occupancy>.) The users manual herein briefly describes the theory behind occupancy modeling and explains how to enter and analyze data and interpret results from drumming surveys. Additionally, we provide recommendations on which type of occupancy and detection probability estimates should be calculated, depending on the needs of the investigator. The program does not provide precision estimates for heterogeneous occupancy or detection probabilities. This item ships from La Vergne, TN. Paperback.
